

# Sophos Removal – Mac Computers

Beginning this summer, Trinity will be transitioning away from our current anti-virus software, Sophos, to Bitdefender. Please follow the directions below to remove Sophos Anti-Virus from your Apple computer, which is a **necessary step prior** to installing Bitdefender Antivirus software.

To remove Sophos Anti-Virus from your Mac navigate to your desktop toolbar, click **Go** and **select Computer**.

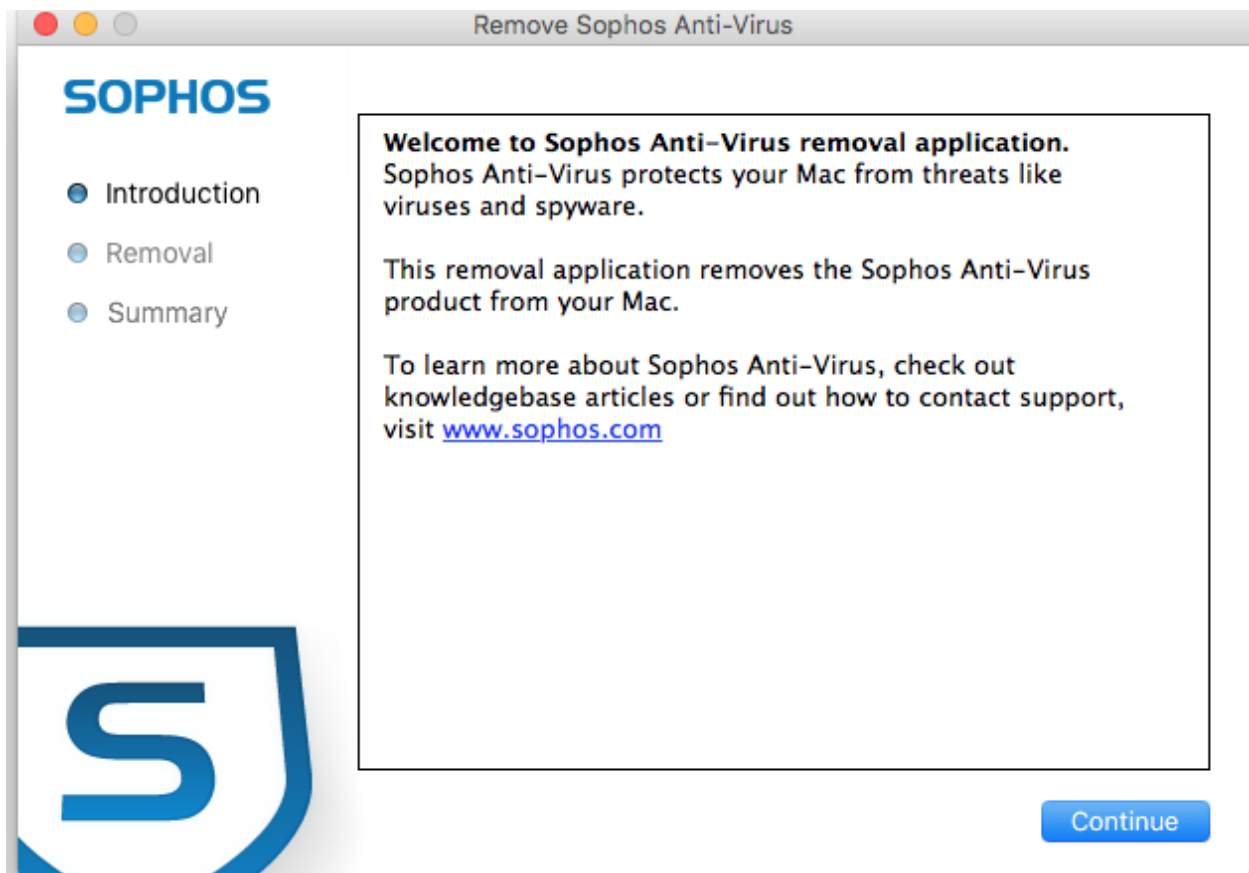

Click on your local hard drive – usually named **Macintosh HD** by default – to open the drive's contents. Now open the **Applications** folder.

Locate and launch the **Remove Sophos Anti-Virus** executable file – click **Continue** to proceed with the removal.

**Remove Sophos  
Anti-Virus**

Input your **Mac's local username and password** when prompted. Click **Close** to close the uninstaller and then **restart your computer to complete the removal of Sophos Anti-Virus software.**
